

## What is claimed is:

1	1. High-voltage direct current cable insulation comprising:		
2	a blend of or which is made from a blend of		
3	(a)	at least one ethylene copolymer, having a density of less than about	
4		0.900grams/cubic centimeter, a melt index of from about 0.5 to about	
5		10grams/10 minutes, a crystallinity of less than about 10 percent and a	
6		catalyst residue of less than about 1000 ppm, selected from the group	
7		consisting of	
8		(i) ethylene/alpha olefin copolymers and	
9		(ii) nonpolar, low crystalline ethylene copolymers selected from the	
10		group consisting of ethylene/propylene copolymer and	
11		ethylene/styrene copolymer and mixtures thereof;	
12	(b)	at least one polar polymer modifier in an amount effective to provide an	
13		insulation made with the blend with an enhanced field conductivity and	
14		enhanced space charge leakage at high fields relative to an insulation	
15		made with a blend which does not include a polar polymer modifier; and	
16	(c)	at least one ion scavenger in an amount effective to reduce ionic	
17		mobility relative an insulation made with a blend which does not include	
18		an ion scavenger,	
19	wherein the	ethylene copolymer, the polar polymer modifier, and the ion scavenger	
20	being in amounts to provide the cable insulation with a charge density of less than 2		
21	Coulomb/mn	n <sup>3</sup> measured by a pulsed electro acoustic method after 24 hours with either	
22	positive or ne	egative 20 kV/mm.	
1	2. High-	voltage direct current cable insulation comprising:	
2	a blend of or	which is made from a blend of	
3	. (a)	at least one ethylene/alpha olefin copolymer having a density of less	
4		than about 0.900grams/cubic centimeter, a melt index of from about 0.5	
5		to about 10grams/10 minutes, a crystallinity of less than about 10	
6		percent and a catalyst residue of less than about 1000 ppm;	
7	(b)	from about 0.1 to about 15 weight percent of at least one polar polymer	
8		modifier having at least one polar component; and	

9	(c)	from a	about 0.05 to about 0.5 weight percent of at least one ion scavenger				
10		having	g at least one chelating component,				
11	wherein the	wherein the ethylene/alpha olefin copolymer, the polar polymer modifier, and the ion					
12	scavenger being in amounts to provide the cable insulation with a charge density of less						
13	than 2 Coulomb/mm <sup>3</sup> measured by a pulsed electro acoustic method after 24 hours with						
14	either positi	ive or neg	ative 20 kV/mm applied.				
1	3. The	high-volt	age direct current insulation of claim 1 or 2, wherein				
2	(a)	the po	lar polymer modifier is selected from the group consisting of (i) a				
3		polym	ner having a density of less than 0.900grams/cubic centimeter with				
4		at leas	st one side group selected from the group consisting of hydroxyl,				
5		carbo	xyl, styrenic; (ii) a polymer having a density of less than				
6		0.900	grams/cubic centimeter and at least one side group which is a				
7		residu	e of maleic anhydride, vinyl acetate or vinyl acrylate; (iii) a				
8		polyla	actone resin and; (iv) mixtures thereof, and				
9	(b)	the io	n scavenger has at least one chelating group.				
1	4. The high-voltage direct current insulation of any of claims 1 - 3, wherein the						
2	ethylene co	pölymer i	s crosslinked.				
1	5. A h	igh-voltag	ge direct current cable comprising:				
2	(a)	an ele	ctrical conductor; and				
3	(b)	cable	insulation comprising				
4	a bl	end or wh	nich is made from a blend of				
5		(i)	at least one nonpolar, low crystalline ethylene copolymer				
6			selected from the group consisting of ethylene/propylene				
7			copolymer and ethylene/styrene copolymer and mixtures thereof,				
8			the ethylene copolymer having a density of less than about				
9			0.900grams/cubic centimeter, a melt index of from about 0.5 to				
10			about 10grams/10 minutes, a crystallinity of less than about 10				
11			percent and a catalyst residue of less than about 1000 ppm;				
12		(ii)	at least one polar polymer modifier having at least one polar				
13			component in an amount effective to provide an insulation made				
14			with the blend with an enhanced field conductivity and enhanced				
15			space charge leakage at high fields relative to an insulation made				

10		with a blend which does not include a polar polymer modifier;
17		and
18	(iii)	at least one ion scavenger having at least one chelating
19		component in an amount effective to reduce ion mobility relative
20		to an insulation made with a blend which does not include an ion
21		scavenger,
22	wherein the ethylene	e copolymer, the polar polymer modifier, and the ion scavenger
23	being in amounts to	provide the cable insulation with a charge density of less than 2
24	Coulomb/mm <sup>3</sup> measu	ared by a pulsed electro acoustic method after 24 hours with either
25	positive or negative 2	20 kV/mm applied.
1	6. The high-volt	age direct current cable as recited in claim 5 wherein the ethylene
2	copolymer is crosslin	ked.
1	7. A method for	providing a cable insulation with a charge density of less than 2
,2	Coulomb/mm <sup>3</sup> measu	ared by a pulsed electro acoustic method after 24 hours with either
3	positive or negative 2	20 kV/mm applied, the method comprising:
4	(a) mixing	g .
5	(i)	at least one ethylene/alpha olefin copolymer having a density of
6		less than about 0.900grams/cubic centimeter, a melt index of
7		from about 0.5 to about 10grams/10 minutes, a crystallinity of
8		less than about 10 percent and a catalyst residue of less than
9		about 1000 ppm.
10	(ii)	from about 0.1 to about 15 weight percent of at least one polar
11		polymer modifier having at least one polar component;
12	(iii)	from about 0.05 to about 0.5 weight percent of at least one ion
13		scavenger having at least one chelating component,
14	wherein the ethylene	c/alpha olefin copolymer, the polar polymer modifier and the ion
15	scavenger being in ar	mounts to provide the cable insulation with a charge density of less
16	than 2 Coulomb/mm	measured by a pulsed electro acoustic method after 24 hours with
17	either positive or neg	ative 20 kV/mm applied.
1	8. High-voltage	direct current cable semiconductive shield comprising:
2	a blend of or which is	s made from a bland of

3		(a)	at least one ethylene copolymer, having a density of less than about	
4			0.900grams/cubic centimeter, a melt index of from about 0.5 to about	
5			10grams/10 minutes, a crystallinity of less than about 10 percent and a	
6			catalyst residue of less than about 1000 ppm, selected from the group	
7			consisting of	
8			(i) ethylene/alpha olefin copolymers and	
9			(ii) nonpolar, low crystalline ethylene copolymers selected from the	
10			group consisting of ethylene/propylene copolymer and	
11			ethylene/styrene copolymer and mixtures thereof;	
12		(b)	a carbon black having a low level of ionic species;	
13		(c)	at least one polar polymer modifier in an amount effective to provide a	
14			semiconductive shield made with the blend with an enhanced field	
15	•		conductivity enhanced space charge leakage at high fields relative to a	
16			semiconductive shield made with a blend which does not include a polar	
17			polymer modifier; and	
18		(d)	at least one ion scavenger in an amount effective to reduce ionic	
19			mobility relative to a semiconductive shield made with a blend, which	
<b>2</b> 0	•		does not include an ion scavenger.	
1	9.	The h	igh-voltage direct current semiconductive shield of claim 8, wherein	
2		(a)	the polar polymer modifier is selected from the group consisting of (i) a	
3			polymer having a density of less than 0.900grams/cubic centimeter with	
4			at least one side group selected from the group consisting of hydroxyl,	
5			carboxyl, styrenic; (ii) a polymer having a density of less than	
6			0.900grams/cubic centimeter and at least one side group which is a	
7			residue of maleic anhydride, vinyl acetate or vinyl acrylate; (iii) a	
8			polylactone resin and; (iv) mixtures thereof, and	
9		(b)	the ion scavenger has at least one chelating group.	
1	10.	The h	igh-voltage direct current semiconductive shield of claim 8 or 9, wherein	
2	the etl	ethylene copolymer is crosslinked.
